

NITTO KOGYO to participate in OCP Global Summit 2025 in the United States

Exhibiting Open Rack (ORv3) at Murata's booth

NITTO KOGYO will exhibit our product at the booth of Murata during "OCP Global Summit 2025," held in San Jose, California from 13th to 16th October 2025.

With the rapid proliferation of generative AI, the data center infrastructure requires higher performance and efficiency. OCP Global Summit is one of the world's most pivotal events, bringing together the latest technologies for addressing challenges in the next-generation AI data centers.

NITTO KOGYO showcases Open Rack (ORv3), a next-generation data center rack compliant with the latest OCP specification. The rack is optimized for implementing high-density, high-heat-generating IT equipment; for example, those used for AI workloads.

We aim to offer enhanced and integrated solutions with high efficiency and reliability, combining both companies' technologies by exhibiting our product at the booth of Murata, who is a global leader in the field of power supply solutions for data centers.

We are looking forward to meeting you at OCP Global Summit 2025.

OCP Global Summit 2025

Date: 13th to 16th October 2025

Event venue: San Jose McEnery Convention Center
(San Jose, California)

Stand No.: B44 (Murata's booth)
